

## Wireless motorcycle intercom

SKU: TEMOTOINTERCOMK

**Water-resistant wireless intercom composed of a receiver with multi-function buttons, headset, microphone and integrated FM radio**

### A CHAT ON THE ROAD

The **wireless motorcycle intercom** is the right product for those who want to talk to their passenger or a biker friend up to a **maximum distance of 1 km**. Easy to place on your helmet, it is water-resistant and can also be used to answer calls received on your smartphone.

### BEFORE GETTING IN THE SADDLE

To position the intercom on the helmet, use the **fixing clamp** or the **support with the adhesive supplied**.

Before setting off on your adventures, make sure you have a full tank of energy: inside the box there is a charging cable for powering the receiver via the Micro USB input.

### HOW TO PAIR A SMARTPHONE

Pair this intercom with your smartphone by pressing the power button on the receiver for about 8 – 10 seconds. After the intercom's LED flashes, you can access your phone's Bluetooth settings and make the connection.

### CALLS AND MUSIC

The intercom can also be used to answer **calls and listen to music**. The **keys** for managing calls and the stations of the integrated FM Radio, for volume adjustment and changing tracks are located on the receiver. When you receive a call on the smartphone associated with the intercom, the connected passenger or other biker will receive a beep in their headset signalling an incoming call, and won't be able to hear the conversation. Your privacy will be guaranteed.

### MANAGE YOUR CONVERSATIONS

The intercom can be used between driver and passenger or between two or three bikers. To use this mode, it is necessary to have at least two intercoms previously paired via the power button.

The **multi-user connectivity** guarantees the connection with a previously paired third intercom: to manage conversations between driver, passenger and another motorcyclist, the power button on the receiver should be used.

### **TECHNOLOGY ON TWO WHEELS**

The adjustable microphone is characterised by **Anti-Wind Noise** technology which eliminates background humming due to the wind. The **DSP** system ensures that the sound of music and calls is clear and crystalline. The intercom can cope with bad weather days as it is also resistant to splashes of water.

### **FEATURES:**

- Wireless V3.0
- Receiver with multi-function keys
- Adjustable microphone
- Mono headset
- Call time: 10 hours
- Talk time via intercom: 6 hours
- Integrated FM radio
- DSP technology (echo cancellation)
- Anti-Wind Noise Technology
- Water-Resistant
- Multi-user connectivity for connecting three intercoms\*
- Maximum distance in intercom mode: 800 – 1000 metres

### **ACCESSORIES INCLUDED:**

- USB charging cable – Micro USB
- Screwdriver
- 2 supports for fixing to helmet

\* Two intercoms are necessary to use device in intercom mode. Only one unit is included in the package

## Details

EAN: 8018417258640  
Included accessories: Screwdriver / Charging cable / 2 supports for fixing to helmet  
Recharging cable: USB/Micro-USB  
Buttons: Multifunction  
Audio sound (mono/stereo): Mono
