

## TWS headphones with multifunctional display and Active Noise Cancelling (ANC) technology

SKU: TEEARTWSMOODBTK

### Much more than a pair of headphones

**ANC technology lets you fully immerse yourself in your music**

The **Mood earphones** are exactly what you're looking for if you want an unparalleled audio experience. They're totally **wireless**: you connect them to one **smartphone, tablet or laptop** wire-free. The **True Wireless Stereo (TWS) technology** allows the two headphones to sync perfectly. The **Active Noise Cancelling (ANC) technology** furthermore **reduces external noise**, ensuring you're fully immersed in your music, films or videos.

**The touch LCD display offers many amazing features**

They stand out for the touch LCD display on the case. Choose between the **various modes** simply by swiping them across the screen. You'll be able to **take photos, set a wallpaper, change the sound equaliser, set an alarm and much more**. You'll also be able to **find a lost headphone**: using the reference mode, tap the headphone you want to find and it will make a sound. In addition to **managing tracks** and the **volume**, you'll be able to activate/deactivate the **ANC** or choose the **transparency mode** to be able to hear external noises more.

**Simply place them in the case to charge, no wires needed**

There **380mAh case** not only protects your headphones, but also charges them. Insert them inside and charging will start **automatically** without the need for any wire. This way, you can easily power them **even when you're away from home**, as well as **extending the** headphone battery life which lasts many hours. When the base is also out of power, connect it to a charger or power bank using the included USB-A - USB-C cable.

**Touch controls on the headphones**

The Moods have dedicated controls for managing music and calls. With a few taps you can **pause/play a song, change tracks, control the volume, answer/end/reject a call** and even **activate the voice assistant**. You can also turn the **ANC** on/off, choose the **transparency mode** or activate the **gaming mode** to amplify the bass and enjoy an immersive experience in your favourite video games.
