

Universal wireless keyboard

SKU: TAUNIKEYBOARDW

Write easily and wirelessly on smartphones, tablets, smart TVs and PCs

COMPATIBLE WITH ANY DEVICE WITH A WIRELESS CONNECTION

The **universal wireless keyboard** is suitable for **any iOS, Android or Windows device** that has a wireless connection. If you want to write a text document on a **smartphone** or **tablet**, you won't have to use the often unintuitive digital keyboard that takes up most of the screen. Searching for a video or film on your **smart TV's** streaming apps will also be very quick: you won't have to use the remote control, which is often awkward for typing letters and numbers.

The **transmission distance of up to 10 metres** allows you to control your device even while sitting comfortably on the sofa.

44 HOURS OF BATTERY LIFE FOR EXTREMELY LONG-LASTING USE

The battery is long-lasting allowing you to work all day even if you're not near a power source. **After almost two days of continuous use, the battery** will run out, but you can easily recharge it with the **power cable included**.

INTEGRATED STAND ALLOWS EASY USE EVEN ON THE SMALLEST DEVICES

The package includes a **stand**. Attach it to the keyboard and **insert your tablet or smartphone** into the slot: **it will remain stable in front of you**. You'll be able to write, read and work on your device as if it were a laptop.

LIGHTWEIGHT AND COMPACT: TAKE IT EVERYWHERE

The universal wireless keyboard is **very light, slim (only 6mm thick) and can easily fit in one hand**. Store it in a backpack or bag to take with you to the park, your favourite coffee shop, or the office.
