

Wireless earphones with Air Conduction System technology

SKU: TEEREARPULSEBTK

The earphones that allow you to listen to music safely and for a long time

Ideal for sport and your bike or scooter rides

The **air-conduction earphones** connect to your device **wirelessly**. They are equipped with **Air Conduction System** technology, meaning you don't have to insert them into your ear, but simply place them over it to listen to your favourite tunes. In this way, you can **still hear outside noises** while running, cycling or scootering. You can also use them **in the rain**: they are IPX4-certified. These headphones are a safe and comfortable choice.

Connect multiple devices with Multipoint technology

If you own both a personal and a business mobile phone, these headsets are just what you need. Thanks to **Multipoint technology**, you can connect **two devices simultaneously**. The **operating range of 15 metres** ensures a stable connection even when devices are far apart or inside a bag.

Music and calls for 8 hours

Their autonomy is extraordinary! In fact, you can listen to **music for up to 8 hours** in a row. Thanks to the built-in **microphone**, you'll also be able to **make long calls** quite easily. With the **USB-A - USB-C cable (included)**, you can recharge the earphones once they run out of power: in **1.5 hours** they will be ready for use again.

Control every function directly from the headset with touch buttons

Practical touch buttons allow you to **control music, calls and voice assistant** easily, directly from the headset, without having to touch the connected device.

Comfortable and practical

The **headband design** envelops your ears in total comfort. The silicone thread ensures stability and comfort for a unique user experience.

Key features:
