

## Windscreen and dashboard car mount with 15W wireless charging

SKU: TESUPEXTWIR15W

**This telescopic car mount allows you to quickly charge your mobile phone (up to 7") while driving**

### THE TELESCOPIC CAR MOBILE PHONE HOLDER THAT'S RIGHT FOR YOU: WHY YOU SHOULD BUY IT

The **telescopic car holder** allows you to power your mobile phone while driving. This mobile phone holder with **15W wireless charging** stabilises your smartphone and, at the same time, provides the necessary charge. Thanks to the suction cup, you can place the holder on **either the windshield or the dashboard** of your car.

### HOW TO USE THE SUPPORT: ATTACHMENT GUIDE

The mobile holder is very simple to use. Fix the suction cup on the dashboard or windshield and, when you want to remove it, simply press the release lever. The stand is equipped with a **sensor** for opening the arms: bring your phone closer and the clamps will open and close automatically to stabilise the phone. The clamps can accommodate mobile phones with a **maximum size of 7"**. When you want to remove it, just touch the release button.

### CHOOSE THE BEST VIEWING MODE FOR YOUR SMARTPHONE

The stand is equipped with an adjustable **telescopic arm** that allows you to choose the most suitable positioning for your needs. The joint allows for **360° rotation**, so the phone can be positioned horizontally or vertically for the most convenient viewing.

### WIRELESS CHARGING: POWER, SPEED AND SECURITY FOR YOUR MOBILE PHONE

If your phone is compatible with the Qi protocol, i.e. the wireless power standard, you can charge it directly through the cradle. The mobile phone holder has a **USB-C** output to which the **power supply cable included in the package** can be connected: the holder will thus receive power from the 12V socket or a car charger. Wireless charging is 15W but, thanks to the **ADS**

**Automatic Detection System** technology, the power is regulated according to the device being charged. In this way, even a mobile phone designed to receive less power (5, 7.5, 10W) can be powered **without overloading and overheating**. With a 15W recharge, your mobile will be fully charged in about 50 minutes.

**DISTINCTIVE FEATURES:**

- Automatic closing of the side clamps with sensor
- Dashboard or windscreen mounting by suction cup
- Joint for 360° smartphone rotation
- Compatible with mobile phones up to 7" such as Apple, Samsung, Xiaomi, Huawei, Oppo and many more
- Devices charged to 100% in just 50 minutes (maximum power output 15 Watt)
- Automatic Detection System (ADS) technology that automatically recognises the device's power requirements at 5/7.5/10 watts
- Cable with USB to USB-C connectors to power the holder

Windscreen and dashboard car mount with 15W wireless charging  
SKU: TESUPEXTWIR15W

## Technical data
